Domain Management

The Domain Management application has several use cases. A user can:

- setup a domain
- upload templates
- choose from a selection of existing templates
- upload external web content
- launch and takedown websites
- categorize live websites on various categorization proxies
- manage DNS and Redirect records.
- categorize websites that are not managed by domain management

These functionalities can be done via a browser or the command line interface. Step by step instructions on each use case is detailed below.

User Roles

There are two user roles in the application:

- Admin
    - This role has access to all functionalities, including all capabilities for the User role.
    - Admins can create and delete domains, applications, templates, content, and other users.
- User
    - This role has a much more limited access
    - Users can upload and download website and template content
    - Manage DNS and Redirect records
    - They can also launch and categorize websites.

Access via the browser:

1. Login to the Domain Management

    - If you don't have an account, click `Register User` and an admin will approve your account and set your user role accordingly.

Login

Please enter your Domain Manager login info below to log in. If you have problems logging in, please contact the Domain Manager Admin.

| Username |
| Password |
